

Living Operating System — FlexGrafik (1 page)

Forward to a partner, developer or accountant. Same diagram as quietforge Technical map — **governance-first**, not full autonomy.

Definition

A living system runs: **Sense** → **Interpret** → **Propose** → **Verify** → **HITL** → **Act** → **Learn** — with measurable outputs and hard guardrails. AI proposes; humans approve.

Six layers (+ Guard always on)

Layer	Role	Modules (examples)
Sense	Read-only signals	GA4, WooCommerce, Game, Portal, VCMS scan — Wizard, Lead Game, Trust Portal, VCMS
Think	Operating intelligence	Jadzia COI — orders, leads, analytics, content (HITL)
Orchestrate	Governed pipelines	Planner, Agent OS, VCMS — Agent OS, Mission Ctrl, VCMS
Act	Bounded writes (HITL)	Checkout, deploy, publish — Wizard, Jadzia COI, Agent OS
Guard	Always on	global-rules, Kaizen, HITL, Zasada 11 — flexgrafik-meta DNA
Memory	Feedback loop	jadzia.db, handoffs, meta docs — Constitution (flexgrafik-meta)

Eight repositories · one supervised LOS

1. zzpackage — Wizard Cash Engine
2. app.flexgrafik.nl — Lead magnet game
3. jadzia-core — Chief Operating Intelligence (COI)
4. agent-os — Agent workforce
5. flex-vcms — Governance layer
6. flexgrafik-nl — Trust Portal
7. flexgrafik-meta — Method / Guard DNA
8. agent-os-ui — Mission Control

Enterprise pattern

- **Applications** — Wizard, Game, Portal (touchpoints)
- **Governance** — Jadzia COI + VCMS + Meta (policy, HITL)
- **AI Services** — Anthropic, OpenRouter, MCP (tools)
