

Living Operating System — FlexGrafik (1 page)

Forward to a partner, developer or accountant. Same diagram as quietforge.flexgrafik.nl home — **governance-first**, not full autonomy.

Definition

A living system runs: **Sense** → **Interpret** → **Propose** → **Verify** → **HITL** → **Act** → **Learn** — with measurable outputs and hard guardrails. AI proposes; humans approve.

Six layers (+ Guard always on)

Layer	Role	Repos (examples)
Sense	Read-only signals	GA4, WooCommerce, Game, Portal, VCMS scan — zzpackage, app, flexgrafik-nl, flex-vcms
Think	Strategy & anomalies	Jadzia Strategist — jadzia-core
Orchestrate	Governed pipelines	Planner, Agent OS, VCMS — agent-os, agent-os-ui, flex-vcms
Act	Bounded writes (HITL)	Operational nodes, code changes — zzpackage, jadzia-core, agent-os
Guard	Always on	global-rules, Kaizen, HITL, Zasada 11 — flexgrafik-meta DNA
Memory	Feedback loop	jadzia.db, handoffs, meta docs

Eight repositories · one supervised LOS

1. zzpackage — Wizard Cash Engine
2. app.flexgrafik.nl — Lead magnet game
3. jadzia-core — Chief Operating Intelligence (COI)
4. agent-os — Agent workforce
5. flex-vcms — Governance layer
6. flexgrafik-nl — Trust Portal
7. flexgrafik-meta — Method / Guard DNA
8. agent-os-ui — Mission Control

Enterprise pattern

- **Applications** — Wizard, Game, Portal (touchpoints)
- **Governance** — Jadzia COI + VCMS + Meta (policy, HITL)
- **AI Services** — Anthropic, OpenRouter, MCP (tools)
