

Workflow map — 12 internal steps → 5 client phases

How a production multi-agent business runs projects — the same workflow used for client deliveries. Process proof, not a sales brochure. No fabricated timelines or metrics.

The five phases you see as a client

01 — Map (*paid first step*)

Find the two or three biggest time-and-money leaks. Score ROI. Agree the first system to build. **Deliverable:** Automation Map + prioritised plan.

02 — Architect

Draw the target system: which agent does what, where data flows, where you approve, what gets logged. **Deliverable:** architecture diagram + plain-language spec.

03 — Build with an AI workforce

Assembled by orchestrated agents — `planner → coder → tester → review` — against fixed rules. **Deliverable:** working system in a test environment.

04 — Verify (*human-in-the-loop*)

Tested on real scenarios. Nothing production until you sign off. Gates are built in, not bolted on. **Deliverable:** tested system + your sign-off.

05 — Hand over & maintain (*no lock-in*)

README, walkthrough, optional light monthly care. Take it in-house anytime. **Deliverable:** handover docs + optional maintenance.

What runs behind the scenes (12-step engine)

The production orchestrator uses twelve enforced steps grouped in six phases:

Internal phase	What it guarantees
Plan & frame	Context loaded, scope approved before build
Design & spec	Schema/contracts updated before code changes
Build & orchestrate	One module per session — no mega-diffs
Test & audit	Security, UX and stability checks
Launch	Manual deploy only — human commander approves
Iterate & handoff	Knowledge captured for the next cycle

You do not manage these steps — you get the **artefacts and approval gates** at the right moments.

Why this is different from „freestyle AI"

- **Fixed pipeline** — not ad-hoc prompting.
- **Agent cards** — each role has a contract.
- **SSoT** — one place for rules; no silent drift.
- **Manual deploy** — production changes stay under human control.

Measurement: process proof — full architecture diagram on request.
